

# Chronic Pain Management

# Training Objectives

- Understanding the definition of chronic pain (concentrating on CNMP)
- Looking at the co-morbidities associated with chronic pain
- Explaining the role of catastrophising and fear avoidance in the development of chronic pain
- Understanding that in chronic pain it is often a case of 'pain management' and not 'pain cure'
- Overview of the non-pharmacological and pharmacological therapies used in chronic pain
- Brief overview of chronic lower back pain
- More detailed look at causes and management options for osteoarthritis

Ward Medication Management's expert clinical pharmacists provide medication management training.
